

ENVIRONMENTAL STATEMENT

28 August 2025

In line with our Shift to Zero sustainability strategy the entire team at Silverstone is fully committed to fulfilling our compliance obligations to the highest standards of environmental responsibility and sustainability, whilst protecting the environment aligning operations with the FIA Three Star Environmental Accreditation and ISO 14001 standards. Silverstone are signatories to the United Nations Framework Convention on Climate Change's initiative: Sports for Climate Action, committing us to a 50% reduction in emissions by 2030, and Net Zero by 2040.

Our Commitment and Objectives:

1. **Resource Efficiency:** We continuously strive to minimise our resource consumption by implementing energy-efficient technologies and adopting a circular economy approach. We actively monitor and manage our energy, water, and materials usage to reduce waste and environmental impact. Resources have been determined and provided for the establishment, implementation, maintenance and continual improvement of the environmental management system.
2. **Green Energy:** Since April 2023, we have been using 100% renewable energy sources to power our operations. We have installed 2764 PV modules that generate 10% of our annual grid consumption. We power our temporary generators with HVO100 biofuel which reduces CO2 emissions by 90% compared to conventional diesel.
3. **Biodiversity and Conservation:** Silverstone is situated in a unique landscape of 586 acres, and we are dedicated to preventing pollution, preserving and enhancing local biodiversity, and promoting sustainable land management practices. In 2025, we began our three-year collaboration with Stowe Gardens, Silverstone's neighbouring National Trust site which aims to enhance local biodiversity through projects, local community engagement and fundraising.

4. **Transport and Accessibility:** We encourage the use of public transportation and carpooling to minimise the environmental impact of events attendees, alongside providing sustainable and accessible transport to site when possible. We have formed a Green Travel Group with our neighbours, aiming to contribute actively to the creation of efficient transportation systems to and from the racetrack and Silverstone Business Park, reducing traffic congestion and emissions.
5. **Waste Management:** We follow a comprehensive waste management programme, promoting recycling and responsible disposal. We achieved a 46% recycling rate in 2024, aiming for 60% in 2025. We aim to minimise waste generation and ensure that waste is properly sorted and processed with none of it sent to landfill since 2018.
6. **Noise Management:** We understand the importance of managing noise pollution in the surrounding areas. We invest in noise-reduction technologies and implement strict noise control measures during events.
7. **Environmental Education:** We believe in raising awareness and educating all stakeholders, including staff, volunteers, suppliers, participants, venue hirers, and fans, about the importance of environmental protection and sustainable practices. We offer environmental inductions and training to new staff members to inform and inspire environmental responsibility.
8. **Community Engagement:** We actively engage with the local community to address environmental concerns and contribute to the region. We participate in local environmental initiatives and support community projects.
9. **Continuous Improvement:** Silverstone Circuit is committed to continual improvement and enhancement of our environmental performance. We regularly review and update our environmental management system to meet the stringent requirements of FIA Three Star Environmental Accreditation and ISO 14001 as well as fulfilling compliance obligations. We are also aiming to achieve ISO 20121 accreditation in 2025.

10. **Stakeholder Collaboration:** We work closely with our partners, suppliers, clients, and governing bodies to promote sustainable practices throughout the motorsport and events industries. Collaboration is key to achieving our environmental goals.

Silverstone's alignment with the FIA Three Star Environmental Accreditation and ISO 14001 reflects our dedication to environmental sustainability, ensuring that motorsport can thrive while respecting the planet and maintaining continuous improvement.

We ensure full compliance with all relevant laws and regulations. A comprehensive legal register is maintained, which is regularly reviewed and updated to reflect any changes in requirements.

By adhering to these principles, we hope to inspire others in our industry to follow a similar path towards a more sustainable and environmentally friendly future for motorsport. Together, we can make a positive difference for our planet and future generations.

Stuart Pringle – Silverstone CEO
